

e-Governance Architecture for UPSC IT Wing

1. Overview:

The e-Governance architecture for the UPSC IT wing ensures high availability and scalability.

2. Cloud Infrastructure:

Applications are hosted on the NIC National Cloud (MeghRaj).

Auto-scaling groups are configured to handle peak loads during exam result declarations.

3. Database Architecture:

PostgreSQL is the primary relational database system.

Database replicas are maintained across two distinct availability zones for disaster recovery.

4. API Integrations:

RESTful APIs are used for communication between microservices.

API gateways handle rate limiting and request validation.
